Docket No.  
ADA10092P00020US**

**Abstract**

A system is provided for supporting articles on a support structure comprising a number of poles. A number of clamps are releasably attached to the poles and a number of article support formations are attachable to the clamps, for supporting the articles. Each clamp is attachable to the poles by receiving a pole in a recess defined in a body of the clamp, in a clipping fashion. The clamp is held in position on the pole by inwardly resilience of arms of the clamp, and by a clasp urging ends of the arms closer together.
